

Q&A Report:	Sustainability 101
"Question Asked"	Answer Given
Any comments about recycling PET vs paper bags & concerns about Covid19 contamination?	<i>It is proven that plastic and paper could be surfaces where Covid 19 would attach. However, the life of the virus on surfaces is short, at the latest few days. PET and paper during the recycling treatment go through chemical/heat treatment that would automatically eradicate any virus left.</i>
Can we sustain the environment by using organic cosmetics?	<i>Yes, by selecting organic ingredients it is possible to reduce the impact of pesticides on the environment. However, in order to sustain the environment additional steps need to be taken (see slide 9).</i>
Is there a global body which regulates organic certifications?	<i>There is not a global body, but there are different organizations/certifications for each countries. Few years ago a consortium of different european labels created a common label called Cosmos</i>
