

NEW PRODUCT ANNOUNCEMENT

Media Contact: Annie Scully, 201-310-9252, press@nyscc.org

Booth Number: 203
Applechem, Inc.

S-Block DZ 100 PDCC is a revolutionary new zinc oxide dispersion designed to meet growing consumer demand for multi-functional sun care products that combine clinically-validated claims with cleaner ingredients. The intersection between clean beauty and clinical treatment has created new product design problems that traditional silicone-based dispersions weren't intended to solve. S-Block addresses these issues by giving formulators the ability to add consistent broad spectrum mineral SPF protection while moving freely between high performance silicone-based, hydrocarbon-based and clean beauty compliant emulsion and anhydrous systems. This makes S-Block an amazing fit for a wider range of sun care applications that need medical grade performance with brand-specific ingredient requirements.

Booth Number: 501
BASF

Z-COTE® Sheer, the newest addition to the Z-COTE® portfolio of Zinc Oxide UV filters: Protection for Every Body Under the Sun, BASF will present the high-performing, naturally derived dispersion that provides ease of formulating and meets consumer standards for sensory. Its best-in-class transparency will be demonstrated with sensory panel data on Fitzpatrick skin types I-V.

ComfortBD™, enrobe skin in comfort with CBD: BASF will offer the extensively researched, tested, and effective solution that helps mattify and soothe the appearance of red, irritated skin.

Booth Number: 113
Biosyntia

BIO-B7 is the world's first fermented, natural and sustainably produced biotin. Biotin, also known as vitamin B7, is relevant for a range of personal care products, especially supporting hair growth, hair quality and brittle nails. Let BIO-B7 be your sustainable hero ingredient in your natural hair or nail care line. Forskolin is the active ingredient in the ancient medicinal plant *Coleus Forskholii*. ForskEffect is 98% pure active Forskolin, source and produced in Europe, fully traceable. It is free from pesticides and organic solvents. Forskolin is recognized for its ability to reduce subcutaneous fat, cellulite skin and uneven skin, when applied topically. Biosyntia are developing a range of bio-based potent single flavonoids with increased stability and bioavailability.

Elevations LLC

Gosulin Rice

A new generation of Rice Starch to purify oily skin. Gosulin Rice is organically grown and cultivated rice from Southern Europe. Unlike standard rice, Gosulin Rice contains an ideal ratio of amylose and amylopectin. This ratio results in a non-sticky ultra small and uniform particle size (average 4um) with a remarkable absorption capacity. The benefits are that it mattifies and lightens the skin, blurs imperfections, refines pores, removes blackheads and has long term impact on sebum reduction.

Evalulab

New web site for EVALULAB, a CRO based in Montreal, Canada that offers clinical studies to evaluate safety, tolerance, efficacy and consumer preference of skin care products. Meet us at BOOTH #549.

Booth Number: 109
GTI Graphic Technology, Inc.

GTI's PVS-1e is used to help with the visual detection of particulate contamination in pharmaceuticals, cosmetics, and other products. It is a tabletop system that conforms to International Pharmacopoeia standards including USP <790> and EP 2.9.30. It includes 6500K lamps, a lamp timer, dimming capability, and a removable back insert panel that is half matte black and half non-glare white. The PVS-1e has a viewing that is 14.25" high x 24" wide x 13.25" deep.

GTI's PPVS-2e is used to help with the visual detection of particulate contamination in pharmaceuticals, cosmetics, and other products. It is a portable system that conforms to International Pharmacopoeia standards including USP <790> and EP 2.9.30. It includes 6500K lamps, a lamp timer, dimming capability, and a removable back insert panel that is half matte black and half non-glare white. The PVS-1e has a viewing that is 13" high x 19" wide x 7.5" deep.

Vertellus

Freshstat™ Cetylpyridinium Chloride is a versatile, safe and cost-effective antimicrobial. It is effective over a broad pH range and exhibits broad activity against Gram-positive and Gram-negative bacteria, yeast, and mold. The active ingredient, Cetylpyridinium Chloride (CPC), is a quaternary compound that is biodegradable and is an excellent alternative to commonly used preservatives (CPC may be used as a preservative only in the USA). As a liquid, Freshstat™ Cetylpyridinium Chloride typically goes into solution more readily. It is manufactured under cGMP conditions in the USA.

Actique™ Hyal Matrix packs seven forms of sodium hyaluronate in one intense hydrating complex. This new addition to Jarchem's active ingredient line offers instant moisturization and increased skin elasticity making it an excellent addition to skin care applications. Due to the varying forms of hyaluronate, this product allows the skin's natural layers to experience an overall rejuvenating feel by locking in the moisture at the surface.

Sucranov™ Micro is a transparent and water-soluble surfactant oil system which can be used in numerous applications to improve product conditioning and cleansing. As a silicone alternative, it can be used in a wide variety of eco-friendly, silicone-free hair products as well as wet wipes and other skin care formulations.

Castorlatum™ Castor Oil is a vegetable-derived alternative to petrolatum. It helps to provide an occlusive barrier (decreasing TEWL) and promotes moisturization. In comparison to petrolatum, it has a lighter feel with similar consistency, has improved shine, and has better photostability. It, also, provides cushion and body to formulations and improves stick integrity.

Laboratory Skin Care Inc.

Hydroxysome's are the newest most advanced dermal delivery platform made of calcium and inorganic phosphate (non-nano) particles. Hydroxysome's are co-engineered with Bioactives such as retinal, adenosine and resveratrol. Hydroxysomes stimulate skin cells to produce elastin and collagen, activates skin cell regeneration by accelerating barrier recovery, improving firmness, cellular cohesion and hydration. It helps to repair damaged skin, improve skin integrity, increases skin flexibility and rejuvenation and reduces the appearance of fine lines and wrinkles.

Also, Hydroxysomes Retinal and Hydroxysomes Adenosine

Siltech

New Silsurf® Sustain Di-1010 offers premium sensorial attributes with the added benefit of improved sustainability. This polyether silicone copolymer has an INCI name of PEG-10 Dimethicone. Silsurf® Sustain Di-1010 differs from traditional offerings as the polyether component is derived from biobased plant sources, rather than petroleum feedstocks. The resulting product performs similarly in applications and contains >66% biobased carbon content. Premium performance and improved sustainability combine to fully satisfy consumer demands!

Siltech's versatile new sugar-modified emulsifier offers premium sensorial attributes with the added benefit of improved formulation sustainability. The reaction of glucose with an aminoalkyl functionalized silicone backbone imparts naturality and builds on functionality.

Silube® Sustain-S is dispersed in a 100% natural and fully biodegradable carrier and is an excellent emulsifier for regular and invert emulsions across makeup and sunscreen formulations. Premium performance and improved sustainability combine to fully satisfy consumer demands!

Prestige Bright Red Glow 35390:
Natural mica platelets coated with iron oxides. Higher red color purity with improved reflectance. Narrow particle size distribution: 20-90µm Technical data: Best suited to provide intense sparkle/ glow effect in cosmetic formulations such as lipsticks, eye makeup and other color cosmetics. Purely inorganic-based, intense red effect pigment with naturality claim.

Benefits: Aesthetically appealing and cost-efficient, bright true red masstone effect pigment. Balance of coverage and luster with enhanced chroma in end applications.

Excellent alternative for vegan, carmine-free formulations. Performance in color cosmetics comparable to glassflakes-based and other synthetic substrate-based masstone pigments.

For standard formulations, a smaller amount of pigment loading can provide a similar effect to the traditional iron oxide-based effect pigments.

Booth Number: 453
Sudarshan North America

Prestige Gold Glow 35382: Natural mica based Iridescent gold (warm) for multiple purposes. Particle Size range from 20-90 µm.

Benefits: Provides exceptional shine with the highest reflectance possible. Gives unique high intense gold color to products and being a good alternative to synthetic substrate-based iridescent pigments. Well suited for both color cosmetics and personal care products.

Prestige Bright Red Glow 35390: Natural mica platelets coated with iron oxides. Higher red color purity with improved reflectance. Narrow particle size distribution: 20-90µm Technical data: Best suited to provide intense sparkle/ glow effect in cosmetic formulations such as lipsticks, eye makeup and other color cosmetics. Purely inorganic-based, intense red effect pigment with naturality claim. Benefits: Aesthetically appealing and cost-efficient, bright true red masstone effect pigment. Balance of coverage and luster with enhanced chroma in end applications. Excellent alternative for vegan, carmine-free formulations. Performance in color cosmetics comparable to glassflakes-based and other synthetic substrate-based masstone pigments. For standard formulations, a smaller amount of pigment loading can provide a similar effect to the traditional iron oxide-based effect pigments.

Sumicos Yellow LHM 2215C: Yellow iron oxides with an incomparable level of purity to exceed the most demanding requirements of the cosmetics industry. This pigment carries the most stringent heavy metal specifications available in the market today. Ideal for blending with other Iron Oxides, Titanium Dioxides etc. at use levels from 0.5 – 20% in cosmetic formulations. Benefits: Sumicos Yellow LHM 2215C surpasses all active global regulations, provided formulators with the highest level of quality assurance. Intense yellow shade.

Uute Scientific Oy

Our patented Re-Connecting Nature™ microbial extract has been created by Finnish universities directly from Finnish nature. It is a substance with a diverse microbial community derived from nature, that restores the physical connection with nature which people have lost, due urbanization and busy lifestyle. Re-Connecting Nature™ microbial extract will bring the beneficial natural biodiversity onto the skin.

The core idea is to replicate the rich biodiversity found in forests and nature and bring that to customers in a safe and easy-to-use form. Our microbial extract has a biodiversically rich microbial composition, which is measured from every manufactured batch using Next Generation Sequencing (NGS). INCI Humus Extract. Scientifically proven natural extract with high biodiversity.
